

Project Definition

Project Title: Online Grocery Shopping App

Domain: JavaScript

Online shopping web application that allows customers to order groceries online from anywhere using the mobile or desktops.

The requested product is delivered to the specified delivery address with appropriate time. Shopping app also provides a variety of categories and products.

Key Features:

Product Catalog: A comprehensive list of products organized by category, with detailed description, images and pricing information.

Shopping Cart: A user-friendly shopping cart that keeps track of items added by the customer and calculates the total cost of order including applicable discounts and taxes.

Order Management: A system for tracking and managing customer orders, including updates on delivery status and the ability to view order history.

Customer Accounts: An optional feature that allows customer to create and manage their own accounts, including saved shipping information and wish listed items.

Technology Stack: Angular, ReactJS, NodeJS, MySQL, TypeScript

Tools: VS Code, Dbeaver database tool, Git
