cybercom creation

Topic: SQL, Database Schema

Created By: Pritey Mehta

Important Notes:

All queries should be submitted in a SQL file with the query number as the file name.

The query definition should be in this file.

Make sure table columns will contains all the necessary data.

Follow the naming convention for table name and columns name.

1. **Create a database structure for product and categories. One product can be in more than one category and one category can have multiple products.**

2. **Create a database structure for students and its college. One student can be on one college only.**

3. **Create a database structure for worldwide cricket team. Database will contain, each player's name, its country, it's expertise and so on.**
